6   **Abstract:** A roof-screen system for supporting a roof screen  
7   on a roof, comprises a plurality of frame elements of round  
8   galvanized steel tubing configured as separate frames. The  
9   frames have a front element, a bottom element, and a diagonal  
10  brace element. A plurality of base supports are secured to  
11  the frame elements and sleeve connectors, including a base  
12  connector, an end connector, and a field connector which  
13  secure the frame elements together and to the base. A  
14  plurality of support elements are used for supporting the  
15  face panels to the front element of the separate frames.
